GRADING NOTES

- 1. A Geotechnical Engineer shall be employed by the owner and be on site during grading operations. All soils tests shall be verified by the Geotechnical Engineer concurrent with the grading and backfilling operations.
- 2. The grading contractor shall perform a complete grading and compaction operation as shown on the plans, stated in these notes, or reasonably implied there from, all in accordance with the plans and notes as interpreted by the Geotechnical Engineer,
- 3. The Contractor shall notify the Soils Engineer at least two days in advance of the start of the grading operation.
- 4. All areas shall be allowed to drain. All low points shall be provided with temporary ditches.
- 5. A sediment control plan that includes monitored and maintained sediment control basins and/or straw bales should be implemented as soon as possible. No graded area is to be allowed to remain bare without being seeded and mulched. Care should be exercised to prevent sail from damaging adjacent property and silting up existing downstream storm drainage system.
- 6. Debris and foundation material from any existing on-site building or structure which is scheduled to be razed for this development must be disposed of off-site.
- 7. All trash and debris on site, either existing or from construction, must be removed and properly disposed of off-site.
- 8. Soft soil in the bottom and banks of any existing or former pond sites or tributaries or on any sediment basins or traps should be removed, spread out and permitted to dry sufficiently to be used as fill. None of this material should be placed in proposed public right-of-way locations or on any storm sewer locations.

improvements

3. 8" P.V.C. sanitary sewer pipe shall meet the following

standards A.S.T.M.-D-3034 SDR-35, with wall thickness

compression joint A.S.T.M.-D-3212. An appropriate rubber

seal waterstop as approved by the sewer district shall be

proposed storm and sanitary sewer lines and/or paved areas,

shall be compacted to 90% maximum density as determined

All filled places within public roadways shall be compacted

density as determined by the "Modified AASHTO T-180 Compaction

installed between P.V.C. pipe and masonry structures.

4. All filled places, including trench backfills, under buildings,

- 9. Site preparation includes the clearance of all stumps, trees, bushes, shrubs, and weeds; the grubbing and removal of roots and other surface abstructions from the site; and the demolition and removal of any man-made structures. The material shall be properly disposed of off-site. Topsoil and grass. in the fill areas shall be thoroughly disced prior to the placement of any fill. The Soils Engineer shall approve the discing operation.
- 10. Compaction equipment shall consist of Ramping rollers, pneumatic-tired rollers, vibratory roller, or high speed impact type drum rollers acceptable to the Soils Engineer. The roller shall be designed so as to avoid the creation of a layered fill without proper blending of successive fill
- fill to verify that specifications are met. A series of fill density tests will be determined on eoch lift of fill, Interim reports showing fill quality will be made to the Owner at regular intervals.
- 12. The Soils Engineer shall notify the Contractor of rejection of a lift of fill or portion thereof. The Contractor shall rework the rejected portion of fill and lobtain notification from the Soils Engineer of its acceptance prior to the placement of additional fill.
- 13. All areas to receive fill shall be scarified to a depth of not less than 6 inches and then compacted in accordance with the specifications given below. Natural slopes steeper than 1 vertical to 5 horizontal to receive fill shall have horizontal benches, cut into the slopes before the placement of any fill. The width and height to be determined by the Solls Engineer. The fill shall be loosely placed in harizontal layers not exceeding 8 inches in thickness and compacted in accordance with the specifications given below. The Soils Engineer shall be responsible for determining the acceptability of soils placed. Any unacceptable soils placed shall be removed at the Contractor's expense.
- 14. The sequence of operation in the fill areas will be fill, compact, verify acceptable soil density, and repetition of the sequence. The acceptable moisture contents during the filling operation are those at which satisfactory dry densities can be obtained. The acceptable moisture contents during the filling operation in the remaining areas are from 2 to 8 percent above the optimum moisture control.
- 15. The surface of the fill shall be finished so that it will not impound water. If at the end of a days work it would appear that there may be rain prior to the next working day, the surface shall be finished smooth. If the surface has been finished smooth for any reason, it shall be scarified before proceeding with the placement of succeeding lifts. Fill shall not be placed on frozen ground, nor shall filling operations continue when the temperature is such as to permit the layer under placement to freeze.
- 16. Fill and backfill should be compacted to the criteria specified in the following toble:

CATEGORY PERCENT COMPACTION 90% Fill in building areas below footings 90% Fill under slabs, walks, and pavement 88% Fill other than building areas Natural subgrade 88% Pavement subgrade 90%

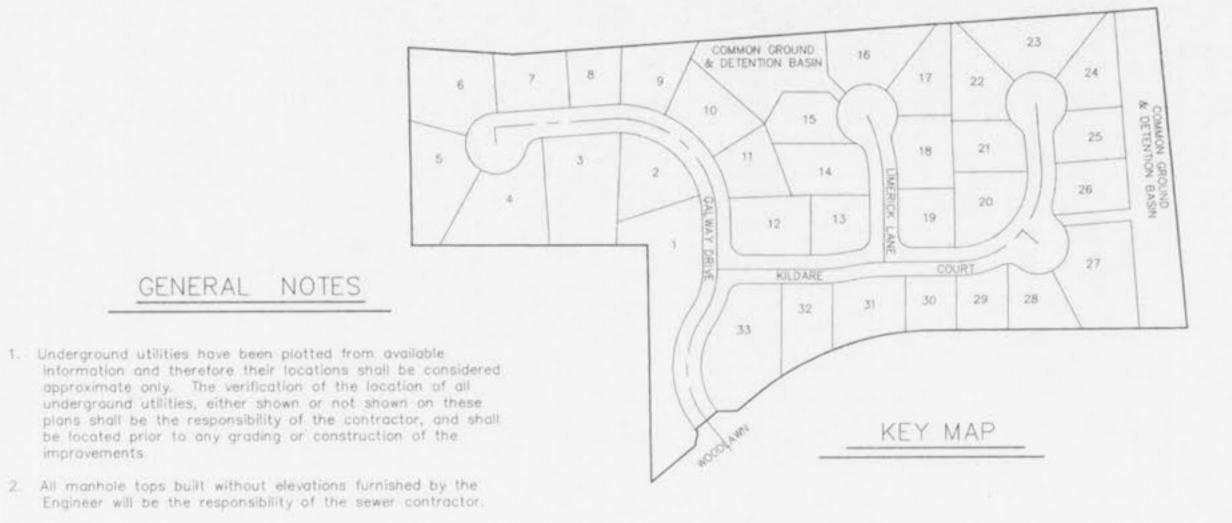

Measured as a percent of the maximum dry density as determined by modified Proctor Test (ASTM-D-15\$7)

Moisture content must be within 2 percent below or 4 percent above optimum moisture content if fill is deeper than 10 feet.

THE VILLAS AT WOODLAWN

A SET OF IMPROVEMENT PLANS FOR

A TRACT OF LAND BEING PART OF FRACTIONAL SECTION 29 TOWNSHIP 47 NORTH, RANGE 3 EAST, ST. CHARLES COUNTY, MISSOURI

TREE PRESERVATION CALCULATIONS:

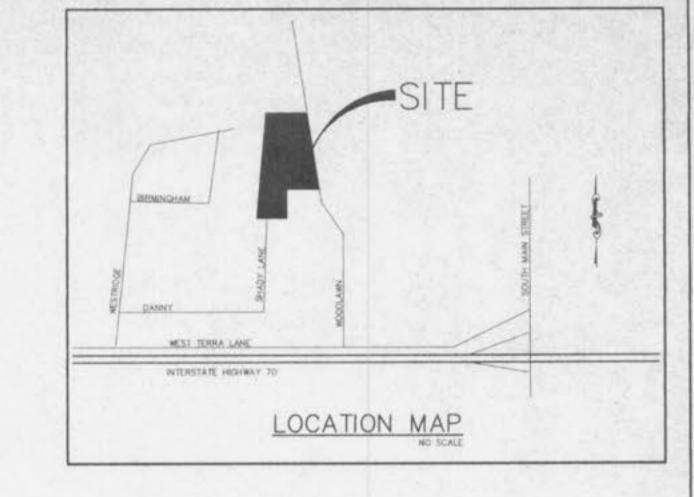

TOTAL AREA OF EXISTING TREE MASSES: 3.11 AC. 3.11 AC. X 20% = 0.62 AC. TOTAL AREA OF PROPOSED CLEARING 2.49 AG. TOTAL AREA OF REMAINING TREES 0.62 AG

0.62 AC. = 0.62 AC = (NO ADDITIONAL TREES NEEDED)

LANDSCAPE REQUIRMENTS:

LENGTH OF CENTERLINE OF STREETS = 1,997 L.F. 1,997 LF. X 2 = 3,994 LF. 3,994 LF./ 50 LF = 80 TREES 101AL PROPOSED = 102 TREES

NOTE: PROPOSED REPLACEMENTS TREES WILL BE HARDWOOD VARIETIES WITH 2" MINIMUM DIAMETER AND A HEIGHT OF B". TREES TO BE PLANTED ON THE INDIVIDUAL LOTS WILL BE PLANTED AFTER HOME CONSTRUCTION AND YARD FINISH GRADING BY THE HOMEDWINER AS REQUIRED IN THE COVENENTS AND RESTRICTIONS FOR "THE VILLAS AT WOODLAWN".

17,146 Square Feet

DEVELOPMENT NOTES

15.77 Acres 1. Area of Tract: R-1 P.U.D. (City of O'Fallon) Existing Zoning: Villas Proposed Use: 33 Lots 4. Number of Lots Proposed:

5 Number of Units Proposed: 78 Units 6. Minimum Lot Area Proposed: 3,500 Square Feet

7. Average Lot Area (not 14,966 Square Feet including common ground): 8 Average Lot Area including

9. The proposed height and lot setbacks are as follows: Minimum Front Yard: 20 feet Minimum Side Yard: 7 feet/15 feet aggregate 25 feet/15 feet (deck) Minimum Rear Yard:

Site is served by: City of O'Fallon Sanitary Sewer Union Electric Company St. Charles Gas Company City of O'Fallon Water GTE Telephone Company Fort Zumwalt School District O'Fallon Fire Protection District

Common Ground:

- 11 No Flood Plain exists on this tract per F.I.R.M. #29183C0110 D and #29183C0116 D. dated August 2, 1996.
- 12. Topographic information is per Walker and Associates Topo on U.S.G.S. Datum.

Maximum Height of Building: 2 1/2 stories or 35 feet

- 13. Boundary information is per deed and record information as compiled by Bax Engineering Co., during April, 1997.
- 14. All streets will be constructed to City of O'Fallon standards. Steets will consist of 26 foot wide concrete pavement with integral rolled curb centered in a 50 foot right-of-way. A minimum centerline radius shall be 150 feet.
- 15. All cul-de-sacs and bubbles will have pavement radii of 42 feet with right-of-way radii of 54 feet. Street intersections shall have a minimum rounding radius of 25 feet with payement radii of 37 feet.
- 16. Minimum street grades shall be 1%
- 17 All homes shall have a minimum of 2 off-street parking places with 2-car garages.
- 18. All utilities must be located underground.
- 19. The smallest lots will require very close individual lot site plan reviews and inspection during construction to insure required seperation of structures and any required fire separation walls.
- 20. A 4' foot wide concrete sidewalk shall be constructed on one side of streets as indicated on plan-
- 21. The developer realizes that they will comply with the current Tree Preservation Ordinance Number 1689 and provide landscaping as set forth in Article 23 of the City of O'Fallon Zoning Ordinance.
- 22. The following lots are susceptible to street movement: Lots 1, 4, 5, 6, 9, 10, 11, 13, 13, 15, 16, 17, 18, 22, 23, 24, 27, 28, 29 and 33.
- 23. The sediment control plan should be implemented before grading begins.
- 24 All erasion control systems shall be inspected and necessary corrections made within 24 hours of any rain storm resulting in one-half inch of rain or more.

Pavement base course 20. All water hydrants and valves shall be ductile iron and installed in

MINIMUM

- 21. All sanitary manholes shall be waterpracted on the exterior in accordance with Missouri Department of Natural Resources specifications 10 CSR-8 120 (7)E
- 22. Brick will not be used in the construction of sanitary sewer manholes.
- 23. All pipes shall have positive drainage through manholes. No flat base structures are allowed
- 24. The City of O'Fallon shall be notified 48 hours prior to construction for coordination and inspection.

depth or horizontal location of existing or proposed sanitary or storm

sewers, including house laterals. 26. All existing site improvements disturbed, damaged or destroyed shall be

25. Gas, water and other underground utilities shall not conflict with the

- repaired or replaced to closely match pre-construction conditions. 27. The contractor shall prevent all storm, surface water, mud and construction debris from entering the existing sanitary sewer system.
- 28. All construction and materials shall conform to the current construction standards of the City of D'Fallon.
- 29. All sanitary and storm sewer trench backfills shall be water jetted. Granular backfill will be used under pavement areas

30. All existing areas disturbed during construction of the off-site sanitary

- sewer line shall be seeded and mulched to prevent erosion. 31. All sanitary sewer laterals shall be a minimum of 4" in diameter per City of O'Fallon
- 32. No flushing hydrants or water meters shall be located in driveways and or walkways.
- 33. Concrete pipe for storm sewers shall be Class III, A.S.T.M. C-76 with a minimum diameter of 12" except in the R.O.W. it shall be 15".
- 34. The ADS N-12 pipe shall have a smooth interior wall.
- 35. Concrete pipe joints shall be MSD type "A" approved compression—type joints and shall conform to the requirements of the specifications for joints for circular concrete sewer and culvert pipe, using flexible, watertight, rubber-type gaskets (A.S.T.M.-C-443). Band-type gaskets depending entirely on cement for adhesion and resistance to displacement during jointing shall not be used.
- 36. When HDPE pipe is used, City of O'Fallon specifications or manufacturers specifications, which ever are more stringent, shall be followed
- 37. The use of High Density Polyethylene Corrugated pipe, ADS N-12 or equal will be permitted as an acceptable alternative to reinforced concrete pipe. Pipe shall meet A.S.T.M.-D-2321 and A.A.S.H.T.O. M-294-291.
- 38. All flared end sections and inlet structures will be concrete.
- 39. All storm sewer pipe installed in the Public Right-of-Way shall be Reinforced concrete Class III pipe.
- 40. All concrete pipe or ADS N-12 pipe shall be installed with "O-Ring" Rubber type gaskets per M.S.D. standard construction specifications or manufacturer.
