

**CREATIVE CORNER DAY CARE
STORM WATER MANAGEMENT
REPORT**

October 29, 2018
Revised February 13, 2019

Prepared For:
Creative Corner Childcare Center
1075 Highway P
O'Fallon, MO 63366
636-272-0222

Prepared by:
E. Krussel, LLC
35 Thoreau Ct.
O'Fallon, MO 63366
636-544-1691

Creative Corner Childcare Center is planning an expansion to their existing facility located at 1075 Highway P in O'Fallon, Missouri. The expansion includes an addition to the existing building in the area of the existing outdoor playground and moving the outdoor playground northwest into the existing storm water detention basin. To make room for the proposed expansion, the existing detention basin will be filled in and a new storm water management facility will be built meeting the current design standards of the City of O'Fallon. The facility will include Water Quality Volume (WQv) to capture and treat the runoff from ninety percent of the recorded daily runoff events. The design of the WQv will meet the requirements of section 405.247 of the City of O'Fallon, MO Development Standards. Creative Corner Childcare Center lies within the Peruque Creek watershed. In accordance with Section 405.240 of the City of O'Fallon, MO Development Standards Paragraph B.4.a, storm water detention of the differential runoff will be provided for the two-, fifteen-, twenty-five-, and one-hundred-year frequency 20 minute storms.

Since this facility is a child day care facility, it requires open space outdoors for a playground facility thus reducing the area available for impervious surfaces. To determine the percent impervious of the facility, the impervious surface areas were calculated. The building with the proposed addition is 9,628 sq. ft. and the paved surface including the proposed 24 added parking spaces is 25,954 sq. ft. for a total of 35,582 sq. ft. of impervious surface. The developed area of the lot was then calculated from a line at the northwest side of the relocated dumpster southeastwardly to Royal Oaks Drive. This area is 76,500 sq. ft. The percent impervious of the area that is being developed is 35,582 sq. ft. / 76,500 sq. ft. = 46.5% impervious. Any future development of the remaining area of the lot would include a small building with enough parking to serve that building. With the proposed storm water management facility taking up a large part of the remaining area of the site and the building setbacks, it would be very difficult to add enough impervious area to exceed 50% total impervious area on the site. If the existing day care facility were removed and the site redeveloped completely, this storm water management facility as designed would be in a poor location for any conceivable redevelopment. The only reason for its location as designed today is that the existing building and parking lot are in the ideal location for a storm water management facility. For this reason the water quality volume and the differential runoff were calculated using 50% impervious for the entire 2.29 acre site.

WATER QUALITY VOLUME (WQv): The following equations are used to calculate the WQv in acre feet of storage required:

$$WQv = (P * R_v * A) / 12$$

P = 1.14 inches of rainfall

Where: $R_v = 0.05 + (0.009 * I)$ where I is percent impervious cover

A = Area of site in acres

The percent impervious is 50% so $R_v = 0.05 + (0.009 * 50) = 0.05 + 0.45 = 0.50$.

$$WQv = (1.14 * 0.50 * 2.29) / 12 = 0.109 \text{ Acre feet} = 4738 \text{ cu. ft.}$$

SEDIMENT STORAGE: Figure 1 of Appendix D of the City of O'Fallon, MO Development Standards was used to determine the volume of sediment storage required for this detention basin. The area tributary

to the basin is 0.66 acres of pervious surface and 0.62 acres of impervious surface. The "C" value for 5% impervious, 0.37, and the "C" value for 100% impervious, 0.77, were obtained from the Metropolitan St. Louis Sewer District Rules and Regulations and Engineering Design Requirements for Sanitary Sewer and Stormwater Drainage Facilities Table 4-36. The prorated "C" value for this development was determined by:

$$0.66 \text{ acres} @ 5\% \text{ impervious} * 0.37 = 0.2442$$

$$+ 0.62 \text{ acres} @ 100\% \text{ impervious} * 0.77 = 0.4774$$

$$0.7216 / (.66 + .62) = .56$$

Figure 1 was entered using 1.28 acres tributary area and a "C" value of 0.56 to determine the annual sediment storage requirement per acre of 180 cu. ft. The sediment storage requirement for 2 years is: 1.28 acres * 180 cu. ft. per acre per year * 2 years = 460 cu. ft.

STORMWATER MANAGEMENT: The attached Table 1 summarizes the differential runoff for each of the storms to be detained. The attached Table 2 summarizes the runoff to the basin for each of storms to be detained.

For Water quality, a bioretention system six feet wide by 35 feet long will be constructed in the bottom of the detention basin per the Metropolitan St. Louis Sewer District Detail 5 for bioretention with internal water storage for retrofit typical section. This system has 40% voids to hold the water and to act as a filter to remove pollutants from the water. The detention basin will be constructed to store the differential runoff from each of the storms. The low flow opening is set at elevation 534.45 which is above the level which will store all of the Water quality volume and the sediment storage. The storage volume below elevation 534.5 is 5346 cu. ft. and the WQv is 4738 cu. ft. and the 2 year sediment storage is 460 cu. ft. for a total of 5198 cu. ft. Table 3 summarizes the runoff to the basin, the flow out of the basin, and the differential runoff required and provided. Table 4 summarizes the Q bypassing the bioretention basin in each of the storms, and Table 5 summarizes the total flow leaving the site to the Northeast and to the Highway P roadway ditch both before any development and after the proposed development with detention. The four storms were modeled using HydroCAD version 10. Summary printouts from HydroCAD from each of the four models are attached. Drainage area maps showing undeveloped drainage areas and developed drainage areas to the bioretention basin and bypassing the bioretention basin.

SUMMARY: The stormwater management system as designed meets the water quality volume, sediment storage and differential runoff requirements of the City of O'Fallon, Missouri for each of the four storms analyzed.

Summary for Pond 2P: Detention basin

Inflow Area = 1.280 ac, 100.00% Impervious, Inflow Depth = 0.96"
 Inflow = 3.64 cfs @ 0.00 hrs, Volume= 0.102 af
 Outflow = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af, Atten= 100%, Lag= 0.0 min
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-3.00 hrs, dt= 0.01 hrs
 Peak Elev= 534.10' @ 0.34 hrs Surf.Area= 2,116 sf Storage= 4,458 cf

Plug-Flow detention time= (not calculated: initial storage exceeds outflow)
 Center-of-Mass det. time= (not calculated: no outflow)

Volume	Invert	Avail.Storage	Storage Description	
#1	527.50'	11,305 cf	Custom Stage Data (Prismatic)	Listed below (Recalc)
Elevation (feet)	Surf.Area (sq-ft)	Voids (%)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)
527.50	210	0.0	0	0
531.00	210	40.0	294	294
531.50	926	100.0	284	578
532.00	1,125	100.0	513	1,091
533.00	1,564	100.0	1,345	2,435
534.00	2,060	100.0	1,812	4,247

Summary for Pond 2P: Detention basin

Inflow Area = 1.280 ac, 100.00% Impervious, Inflow Depth = 1.47"
 Inflow = 5.57 cfs @ 0.00 hrs, Volume= 0.156 af
 Outflow = 1.41 cfs @ 0.34 hrs, Volume= 0.033 af, Atten= 75%, Lag= 20.4 min
 Primary = 1.41 cfs @ 0.34 hrs, Volume= 0.033 af

Routing by Stor-Ind method, Time Span= 0.00-3.00 hrs, dt= 0.01 hrs
 Peak Elev= 535.01' @ 0.34 hrs Surf.Area= 2,621 sf Storage= 6,620 cf

Plug-Flow detention time= 37.9 min calculated for 0.031 af (20% of inflow)
 Center-of-Mass det. time= 28.6 min (38.5 - 9.9)

Volume	Invert	Avail.Storage	Storage Description	
#1	527.50'	11,305 cf	Custom Stage Data (Prismatic)	Listed below (Recalc)
Elevation (feet)	Surf.Area (sq-ft)	Voids (%)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)
527.50	210	0.0	0	0
531.00	210	40.0	294	294
531.50	926	100.0	284	578
532.00	1,125	100.0	513	1,091
533.00	1,564	100.0	1,345	2,435
534.00	2,060	100.0	1,812	4,247
