### DETENTION BASIN

The City of O'Fallon detention basin design requirements are that the post development 2, 15, 25, and 100 year storm discharge from the basin be less than the pre development discharge rate for the same return period storms.

Computer programs TR-55 and Hydraflow Hydrographs by Intelesolve were utilized to determine maximum runoff rates and water surface elevations in the detention basin. The NCRS hydrologic characteristic grouping for all soils within the project area is type "C". With a letter designation system from "A" to "D" with "A" being the most pervious and "D" being the least pervious a soil classification of "C" describes a surface that does not readily absorb runoff. This is evident by the minimal increase in flow from the pre to the post development condition.

The following table provides a summary of flow rates and water surface elevations for the detention basin.

Storm Return Period, i	Pre Development Flow, (CFS)	Post Development Flow In, (CFS)	Post Development Flow Out, (CFS)	Elevation
2 Year, 2.39	5.60	16.55	5.18	564.80
15 Year, 5.20	22.47	38.98	21.18	566.12
25 Year, 5.40	23.74	40.56	22.90	566.18
100 Year, 7.00	34.25	53.13	32.34	566.66

The detention basin was analyzed with the low flow blocked resulting in a maximum water surface elevation of 567.70. The elevation is 1.00 feet lower than the top of the detention basin berm (568.70) thus providing more than 1 foot of free board.

### STORM SEWER DESIGN

The site storm sewers were also designed based on the City of O'Fallon requirement of a 15 year storm recurrence interval. The minimum pipe diameter for the collection system is 12 inch. The storm sewer improvements are limited to adding a grated inlet at the bottom of a ramp for a loading dock and intercepting an existing downspout collector system along the north end of the building, all other areas are either served by an existing storm sewer or surface drains to the detention basin. The runoff value per acre used for the building roof and ramp will be 3.5 c.f.s. per acre (15 year, 100% impervious).

### DOWN STREAM STORM SYSTEM ADAQUACY

After the Stormwater leaves the existing detention basin it travels in a ditch parallel and east of Hoff Road in a northerly direction. Approximately 80 feet north of the site is a cross road corrugated metal pipe culvert that carries runoff under Hoff Road from the east to the west side. Only the top

few inches of the culvert can be seen, the lower portion is filled with debris. Because of the condition of the culvert it is not possible to determine the adequacy of the storm sewer system downstream of the site. It is however possible to compare the discharge from the site based on the current detention basin with the proposed detention basin and see if the site runoff flow rate has decreased. Reducing the runoff to a level that is less than the rate currently discharged would alleviate any problems that currently exist. The existing basin was modeled and the results can be found in the table below.

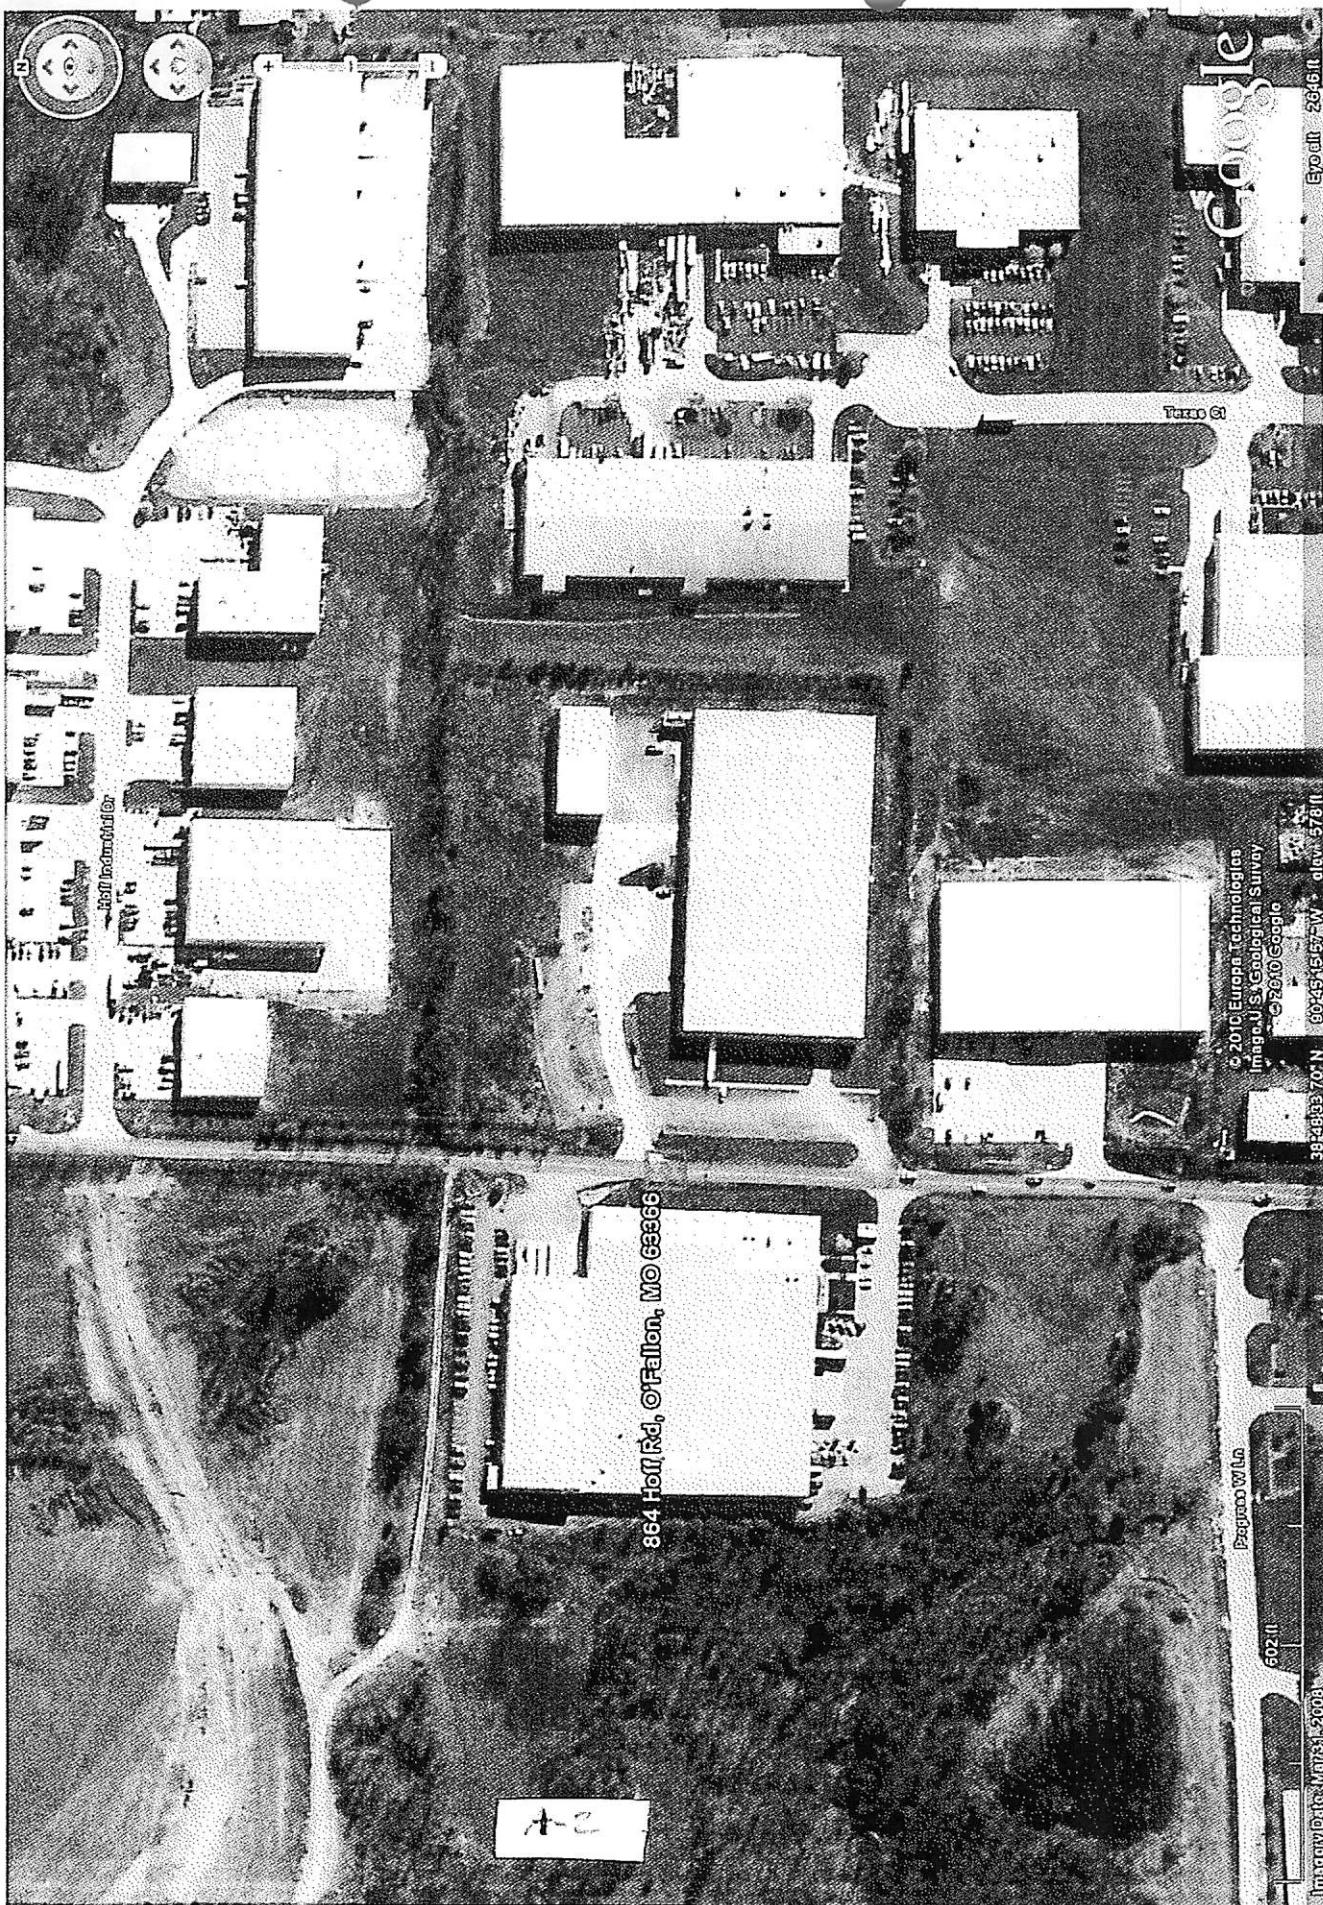

Storm Return Period	Pre Development Flow In, (CFS)	Pre Development Flow Out, (CFS)	Elevation	Maximum Storage CF
100 Year	40.90	40.18	566.21	6324

Based on a 100 year storm, the maximum flow rate exiting the basin (site) as it exists today is 40.18 c.f.s., the maximum storage volume is 6324 cubic feet, this compares with 30.48 c.f.s. and a maximum storage volume of 31,336 cubic feet in the post development state. By increasing the detention basin by 5 times we have significantly reduced the discharge from the site.

The site improvements will include cleaning the ditch and cross road culvert to improve flow along and under Hoff Road.

## MAP INFORMATION

Map Scale: 1:1,540 if printed on A size (8.5" × 11") sheet.

The soil surveys that comprise your AOI were mapped at 1:24,000.

Please rely on the bar scale on each map sheet for accurate map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL: <http://websoilsurvey.nrcs.usda.gov>

Coordinate System: UTM Zone 15N NAD83

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: St. Charles County, Missouri

Survey Area Data: Version 9, Jun 3, 2009

Date(s) aerial images were photographed: 8/10/2007

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

### Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

**Group A.** Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

**Group B.** Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

**Group C.** Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

**Group D.** Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

### Rating Options

**Aggregation Method:** Dominant Condition

**Component Percent Cutoff:** None Specified

**Tie-break Rule:** Lower

**COMPUTATION SHEETS**

PROJECT #: 2210008-00  
 PROJECT TITLE: 804 W. Rock Road  
 CLIENT: JRW Construction

COMPUTED BY: St. David  
 CHECKED BY: \_\_\_\_\_  
 DATE: 7-26-2010

Depth' Segment' Length' Volume'

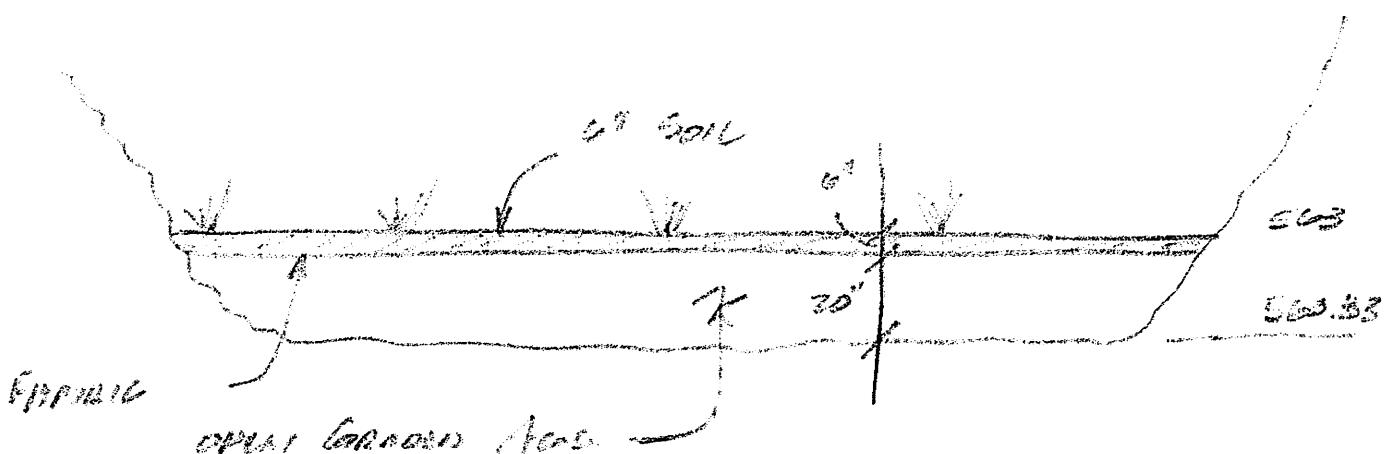

$$\begin{aligned} \text{Volume} &= 2.3 \text{ in.} \times .015 \text{ cu ft/in.} \\ &= 2.3 \text{ in.} \times \frac{1}{12} \times 7.72 \text{ ft.} \times 43560 \\ &= 5610 \text{ cubic feet.} \end{aligned}$$

- Use first of formula given to solve for volume.
- Rearrange to find void space = Depth of material - Depth of rock

$$\frac{\text{void}}{.40} \text{ cu. ft.} = \text{area of basal} \times \text{depth of rock.}$$

$$14,035 \text{ cu. ft.} = 3641 \times \text{depth of rock}$$

$$\text{Depth of rock} = 1.63' = 1' 7.5" = 1' 8" = 20"$$

MISSOURI DEPARTMENT OF NATURAL RESOURCES  
WATER PROTECTION PROGRAM  
FORM E - APPLICATION FOR GENERAL PERMIT  
UNDER MISSOURI CLEAN WATER LAW

FOR AGENCY USE ONLY	
CHECK NUMBER	
DATE RECEIVED	FEES SUBMITTED

1.00 CATEGORY OF GENERAL PERMIT APPLIED FOR

LAND DISTURBANCE

1.10

- a. This facility is now in operation under Missouri Operating Permit Number, or NPDES, MO - \_\_\_\_\_ and there is not a proposed increase in design flow.
- b. This facility is now in operation under Missouri Operating Permit Number MO - \_\_\_\_\_ and there is a proposed increase in design flow.
- c. This is a new permit.

If you checked either item b or c above then you may need to submit an antidegradation review. See instructions.

D. DATE SIGNED

## INSTRUCTIONS

This form must be submitted with the application fee (listed below). Persons with more than one operating location shall obtain a general permit for each location unless other permitting arrangements are allowed by the terms of the general permit. Where multiple discharge points exist at a single operating location, one application may cover all the applicable discharges. If there are any questions concerning this form, please contact the appropriate regional office (see map available at [www.dnr.mo.gov/regions/regions.htm](http://www.dnr.mo.gov/regions/regions.htm)).

- Fees: Land Disturbance (Form G must be included) - \$300 (due at application time only)  
Ag Chem Fertilizer/Pesticide - \$50 due with application for new permits; \$50/year while permit is in effect; no fee required with renewal application  
Concentrated Animal Feeding Operation, or CAFO - \$150 (due at application time only)  
General Permit – Other (e.g., Motor Vehicle Salvage, Limestone Quarry, Petroleum Storage.) - \$150 due with application for new permits and each year until expiration; \$60/year thereafter; no fee required with renewal application.
- 1.00 Give the name of the specific general permit you are applying for: (e.g., Land Disturbance, Motor Vehicle Salvage.) If you are unsure about the specific name for the general permit, contact the Water Protection Program, Water Pollution Branch at 573-751-8825.
- 1.10 Fill out either item (a., item (b., or item (c. as applicable.
- Each General permit may have specific antidegradation review requirements contained within it. Go to the following Web sites to verify your specific requirements: For MO-G permits visit [www.dnr.mo.gov/env/wpp/permits/wpcpermits-general.htm](http://www.dnr.mo.gov/env/wpp/permits/wpcpermits-general.htm). For MO-R permits visit [www.dnr.mo.gov/env/wpp/permits/wpcpermits-stormwater.htm](http://www.dnr.mo.gov/env/wpp/permits/wpcpermits-stormwater.htm).
- Effective Sept. 1, 2008, facilities are required to use *Missouri's Antidegradation Rule and Implementation Procedure*. This document is available on the Web at [www.dnr.mo.gov/env/wpp/docs/zip-cwc-appr-050708.pdf](http://www.dnr.mo.gov/env/wpp/docs/zip-cwc-appr-050708.pdf). For more information please contact the Department at 800-361-4827 or 573-751-1300.
- 2.00 Name of facility – by what name is this facility known locally? (e.g., Southwest Sewage Treatment Plant or Oak Hill Mobile Home Park.)
- 2.10 Give the street address of the facility. If the facility lacks a mailing address, give an accurate geographic description. (e.g., Intersection of Route A and M.)
- 3.00 Owner – legal name and address of owner.
- 4.00 Continuing Authority – permanent organization which will serve as the continuing authority for the operation, maintenance and modernization of the facility.
- 5.00 Operator – name, certificate number of person operating the facility.
- 6.00 Give name of person at the facility who can be contacted by the Department if necessary.
- 7.00 An outfall is the point(s) at which wastewater is discharged. For storm water this may be the point(s) where water leaves the property. Outfalls should be given in terms of the legal description of the facility. Sufficient information should be submitted so the outfall may be located by Department staff.
- 7.10 Receiving stream(s) – the name of the stream(s) to which the discharge is directed and any subsequent tributary until a lake or continuous flowing stream is reached.
- 7.20 Describe the primary business conducted at this site.
- 7.30 A combined sewer system is one in which the sanitary and storm sewers are one pipe. In Missouri, parts of Macon, Moberly, Cape Girardeau, St. Joseph, Kansas City, Sedalia and all of the city of St. Louis are on combined sewer systems. To find out information, consult with your municipal public works department or, if in St. Louis, the St. Louis Metropolitan Sewer District (MSD). If this discharge is to a combined sewer system, it is exempt from storm water permitting requirements. You do not need to file this application if it is for storm water discharges only.
- 7.40 List only your primary Standard Industrial Classification, or SIC, code. The SIC system was devised by the U.S. Office of Management and Budget to cover all economic activities. The primary SIC code is that of the operation that generates the most revenue, or, secondly, employs the most personnel. To find the correct SIC code, contact the Missouri Department of Natural Resources at 573-526-6627 or refer to the following Web sites: [www.census.gov/epcd/www/naicstab.htm](http://www.census.gov/epcd/www/naicstab.htm) or [www.osha.gov/pls/mis/sicsearch.html](http://www.osha.gov/pls/mis/sicsearch.html).
- 7.50 Please list anything stored outside, including wood pallets, empty storage barrels, waste disposal containers (except for a secured Dempsey dumpster), or anything that is a raw material, by-product, or product of your manufacturing activities.
- If your facility is listed under any of the following SIC codes or major group codes, and you can certify that no materials are stored outside, then you are exempt from storm water permitting requirements. You do not need to file this application if it is for storm water discharges only. This information refers to the first two, first three, or all four numbers of your SIC code listed in 7.40 above. The SIC codes that are exempt from regulations if no materials are stored outside are: 20xx-23xx, 25xx, 265x, 267x, 27xx, 283x, 285x, 30xx, 31xx, 323x, 34xx-39xx, and 4221-4225.
- 7.60 A map showing the facility in relation to the local roads and receiving streams is required. Attach a 1" = 2000' scale U.S. Geological Survey topographic map, which is available from the Department's Division of Geology and Land Survey in Rolla, MO at 573-368-2125.
- 7.70 If this is an existing discharge, submit a list of pollutants that have been analyzed in the past two years and any laboratory findings.
- 7.80 Give the method of domestic wastewater disposal, identify the future method if the site is currently undeveloped. If public sewers, give name of sewer agency. If private system with a State Operating Permit, give name of facility and permit number. If other, please describe.
- 8.00 Signature – all applications must be signed as follows and the signature must be original.
- For a corporation, by an officer having responsibility for the overall operation of the regulated facility or activity or for environmental matters.
  - For a partnership or sole proprietorship, by a general partner or the proprietor.
  - For a municipal, state, federal, or other public facility, by either a principal executive officer or by an individual having overall responsibility for environmental matters at the facility.

MISSOURI DEPARTMENT OF NATURAL RESOURCES  
WATER PROTECTION PROGRAM  
FORM G – APPLICATION FOR STORM WATER PERMIT (FORM E MUST BE INCLUDED)  
UNDER THE GENERAL PERMIT: LAND DISTURBANCE

A map of the appropriate regional office is available on the department's Web site at [dnr.mo.gov/regions/regions.htm](http://dnr.mo.gov/regions/regions.htm).

Name of development

*SAX CONSTRUCTION*

Phase (Indicate Phase I, II, etc., if applicable.)

*PHASE 1*

Nature of construction activity

*LAND DISTURBANCE*

Physical location of development (Address, if assigned.)

*864 HOFF ROAD, O'FALLON MO 63366*

Date construction is to begin

*JULY 2010*

Total area of site: 7.72 acres

Total area of land to be disturbed: 2.3 acres

Is a department of Natural Resources approved erosion control plan operative in the city or the unincorporated area of the county in which the land disturbance is occurring?

Yes  No

If yes, a letter of approval or a copy of a permit from the local authority is required and must be enclosed for the permit to be issued.

Please check this box if enclosed.

Has a Storm Water Pollution Prevention Plan, or SWPPP, been developed for this site?

(This plan must be developed in accordance with requirements and guidelines specified within the general permit for storm water discharges from land disturbance activities. The application will be considered incomplete if the Storm Water Pollution Prevention Plan has not been developed. Please do not enclose a copy of the plan. A copy of the Storm Water Pollution Prevention Plan may be requested by the department at any time.)

Yes  No

The department requests that a completed Storm Water Pollution Prevention Plan be submitted along with the application if:

- The receiving water is Lake of the Ozarks, or  
 The first classified waterbody is Lake of the Ozarks.

Summarize the measures (Best Management Practices) from the Storm Water Pollution Prevention Plan that will be used to control pollutants in storm water discharges during constructions.

*PERIMETER FILTER FABRIC BARRIER, STRAW BALE DITCH CHECK,  
INLET PROTECTION, TEMPORARY SEEDING + MULCHING, SILTATION BASIN*

Summarize Best Management Practices from the Storm Water Pollution Prevention Plan that will remain in place after construction operations have been completed.

*PERMANENT SEEDING, VEGETATED SWALES, DETENTION BASIN  
WATER QUALITY UNIT*

Describe the nature of the fill material.

*FILL MATERIAL WILL BE EXCAVATED FROM ON SITE LOCATIONS  
SOILS REPORT INDICATES MEDIUM STIFF TO STIFF, LOW AND HIGH  
PLASTICITY CLAY*

MO 780-1408 (03-10)

**ATTACH ANY EXISTING DATA CONCERNING SOIL OR QUALITY OF THE DISCHARGE.**

Estimate of runoff coefficient of site. 0.68

Estimate of increase in impervious area. % Decrease

Estimate of runoff coefficient upon completion. 0.67

Is the land disturbance within 1,000 feet of:

- Water classified in 10 CSR 20-7.031 water quality standards as a public drinking water supply lake (L<sub>1</sub>), outstanding national or state resource waters, or streams designated for cold-water sport fishery.
- Streams, lakes or reservoirs identified as critical habitat for endangered species as determined by Missouri Department of Conservation and U.S. Fish and Wildlife Service.

Is the land disturbance within 100 feet of waters classified as major reservoirs (L<sub>2</sub>) or permanent flow streams (P), except the Missouri and Mississippi rivers, or within two stream miles upstream of biocriteria reference locations as defined in 10 CSR 20, Chapter 7?

Yes  No

Is any part of the area that is being disturbed discharging to a jurisdictional water of the United States?

Yes  No

If yes, have you received a CWA, Section 404 Permit for this site from the United States Army Corps of Engineers? (The permit cannot be issued until the site is under a 404 or Nationwide General Permit, if one is required.)

Yes  No

Does the storm water runoff discharge to a sinkhole, losing stream, or any other topographical feature that would be a direct conduit to groundwater?

Yes  No

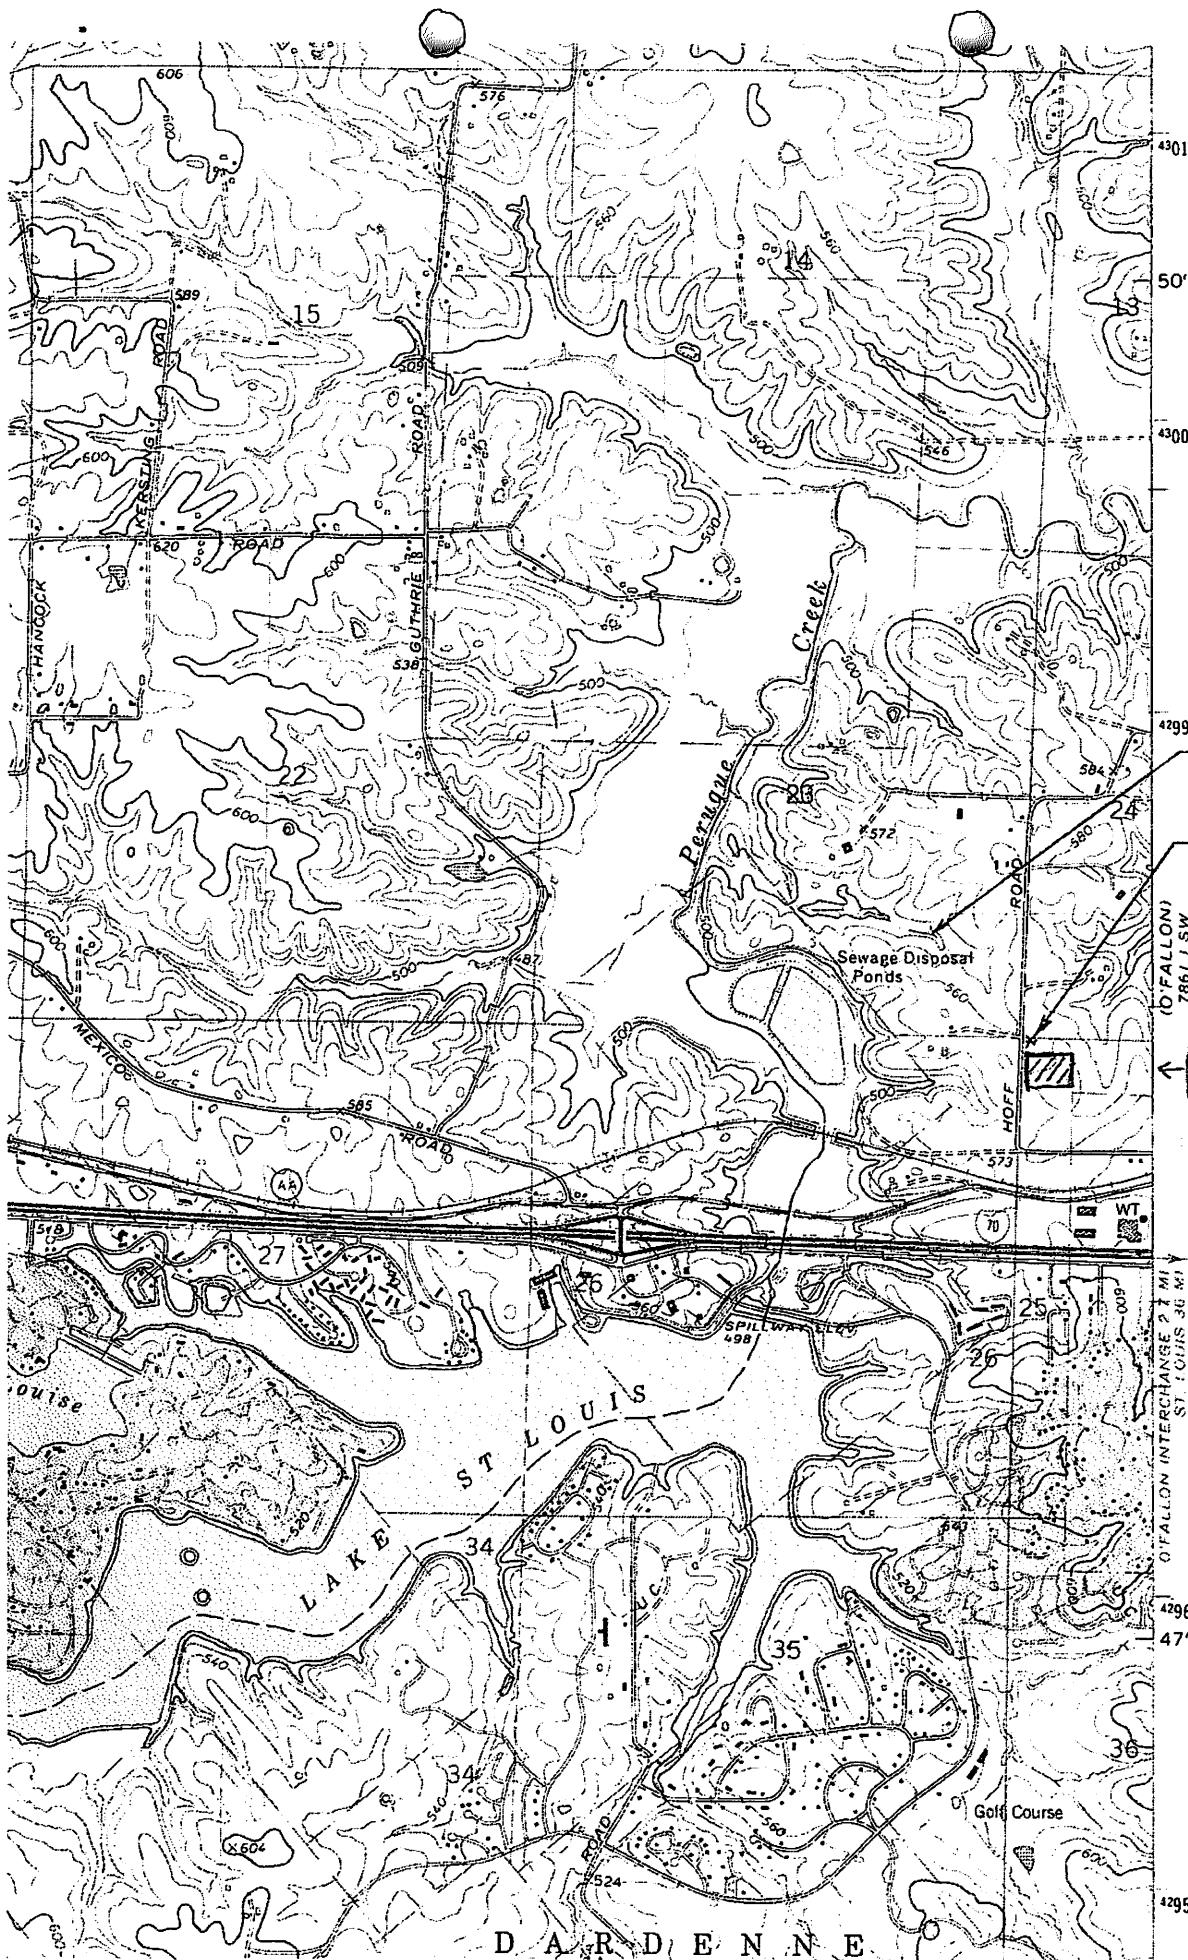

I certify I am familiar with the information contained in the application, that to the best of my knowledge and belief such information is true, complete and accurate, and if granted this permit, I agree to abide by the Missouri Clean Water Law and all rules, regulations, orders and decisions, subject to any legitimate appeal available to an applicant under the Missouri Clean Water Law of the Missouri Clean Water Commission.

**SUBSURFACE EXPLORATION**  
**SAK OFFICE ADDITIONS**  
**O'FALLON, MISSOURI**

**SECTION I - EXECUTIVE SUMMARY**

The executive summary is provided solely for the purposes of overview, and a number of details are omitted, any one of which could be crucial to the proper application of this report. Any party who relies on this report must read the full report.

- The project includes construction of an office/warehouse addition and the relocation of a three-sided shed.
- Below the topsoil at the boring locations, the stratigraphy generally consists of inter-bedded, medium stiff to stiff, low and high plasticity clay underlain by weathered limestone. Fill is present in one boring to a depth of approximately 4 feet. Sampler refusal occurred in one of the four borings at a depth of approximately 19 feet. Groundwater was not encountered.
- Highly plastic soil occurs in all of the borings. Highly plastic soil occurring within 2 feet of lightly loaded footings and within 3 feet of floor slab subgrade must be remediated as discussed herein.
- Fill, where present, should be considered uncontrolled and compressible. Complete fill remediation is recommended due to the apparent shallow fill depth. However, proof-rolling and remediating localized soft zones is an option in slab-on-grade areas provided a higher level of risk for settlement is acceptable.
- Strip and spread footings may be proportioned for net allowable bearing pressures of 2,000 and 2,500 pounds per square foot (psf), respectively, provided the footings bear on natural soil and/or controlled fill.
- The site soil profile may be classified as Site Class C in accordance with International Building Code (IBC) criteria.

## Universal Soil Loss Equation:

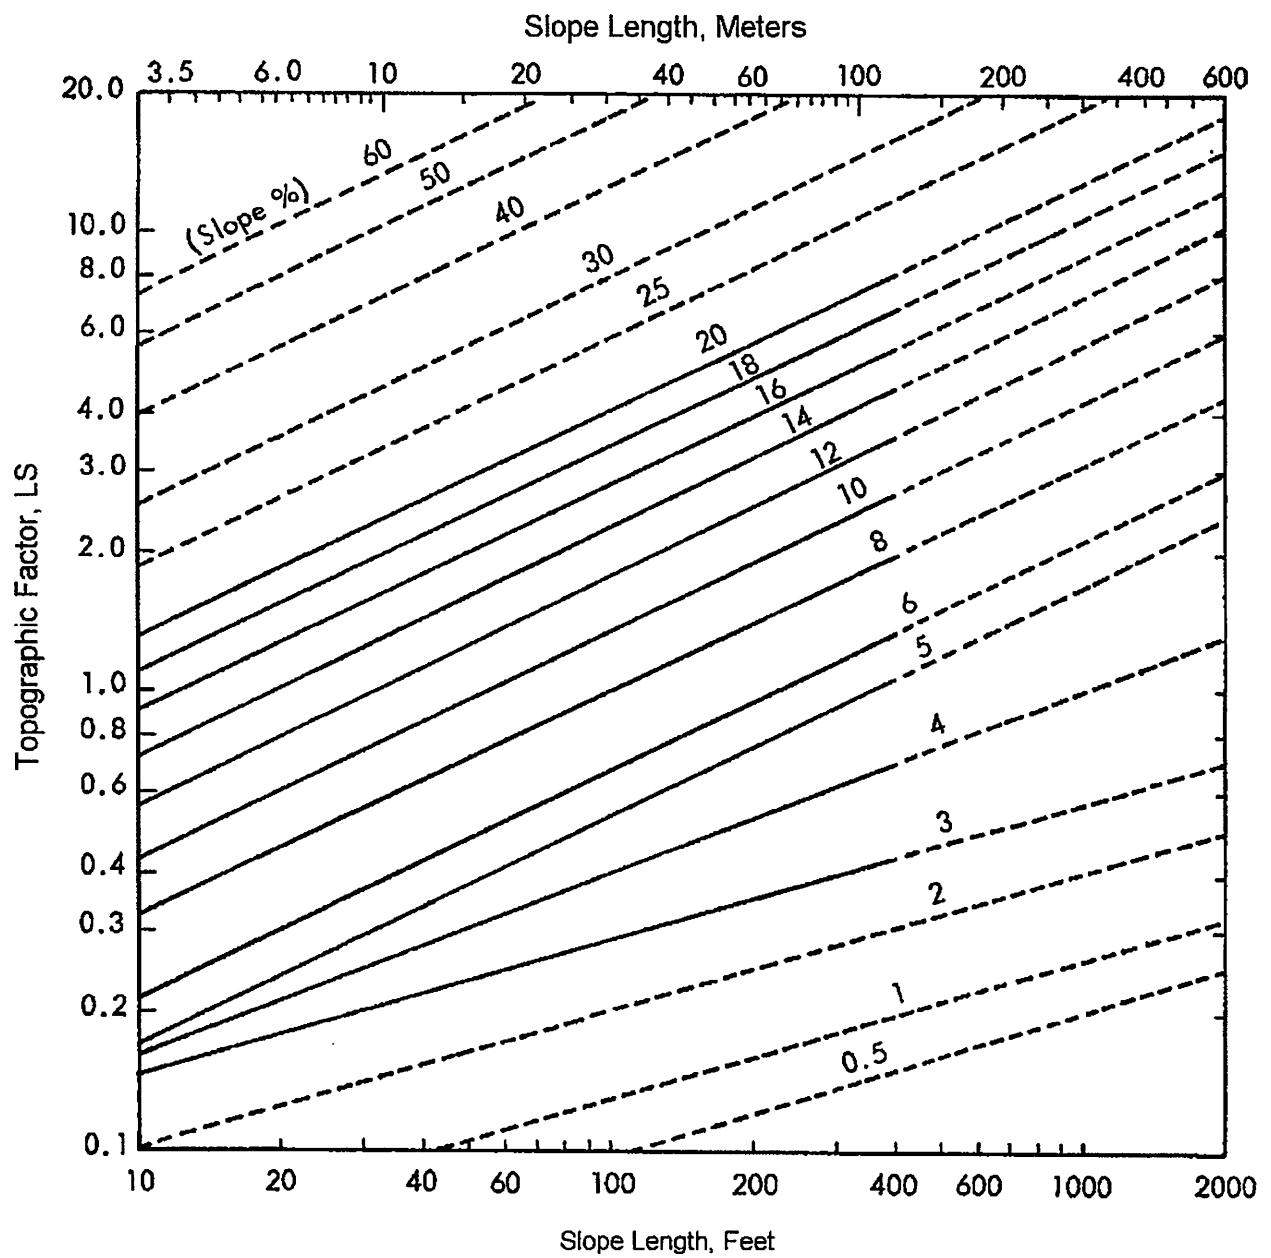

(Wischmeier and Smith)

$$\boxed{A = RKLSCP}$$

- A = Computed soil loss per unit area (tons per acre)
- R = Rainfall factor  
# of erosion index units in a normal year's rain. Erosion index is a measure of the erosive force of a specific rainfall
- K = Soil erodability factor  
erosion rate/unit of erosion index for a specific soil in cultivated continuous fallow on a 9% slope 72.6 feet long
- L = Slope length factor  
ratio of soil loss from the field slope length to that from a 72.6-foot length on the same soil type and gradient
- S = Slope gradient factor  
ratio of soil loss from the field gradient to that from a 9% slope
- C = Cropping management factor  
ratio of soil loss from a field with specified cropping and management to that from the fallow condition on which the factor K is evaluated
- P = Erosion control management factor  
ratio of soil loss with contouring, strip cropping or terracing to that with straight-row farming, up and down slope

6-4

Dashed lines represent estimates for slope dimensions beyond the range of lengths and steepnesses for which data are available

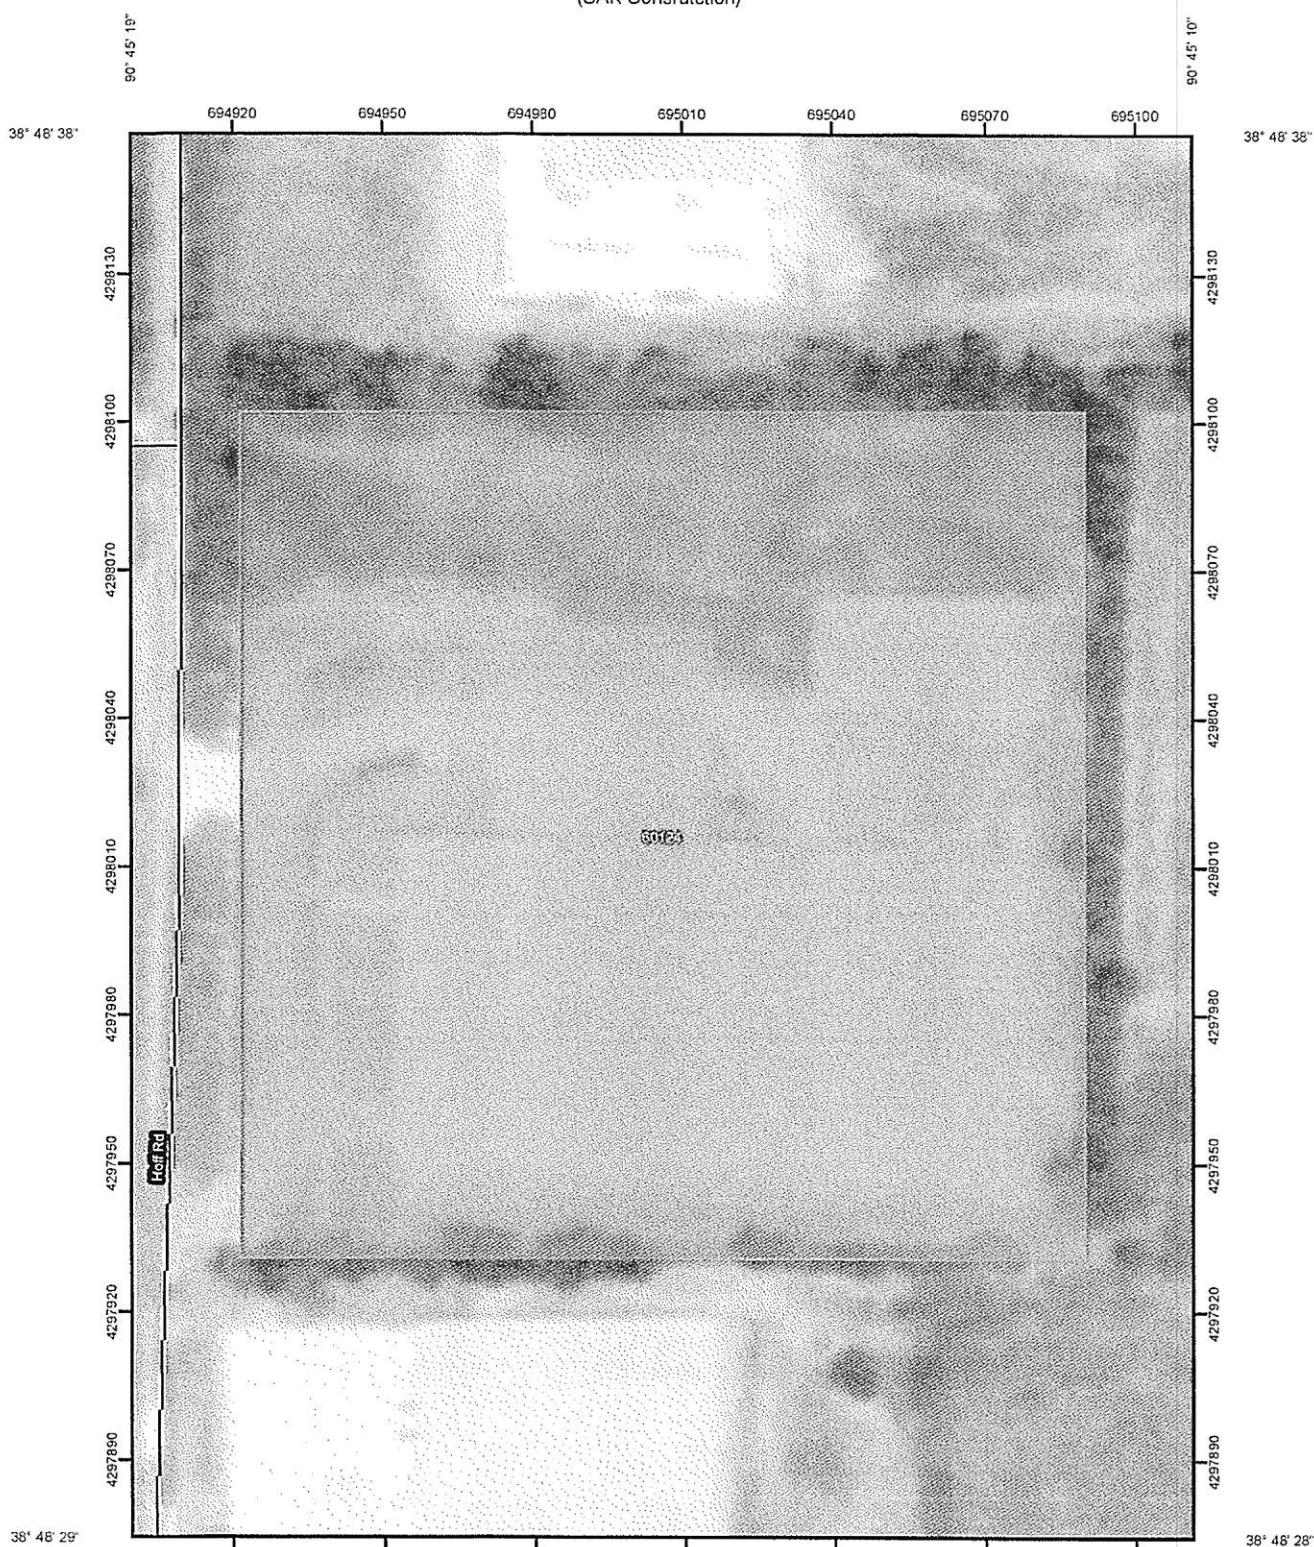

RELATIVE PROTECTION OF GROUND COVER AGAINST EROSION  
(in order of increasing C factor)

Land-use groups	Examples	Range of "C" values
Permanent vegetation	Protected woodland Prairie Permanent pasture Sodded orchard Permanent meadow	0.0001 -- 0.45
Established meadows	Alfalfa Clover Fescue	0.004 -- 0.3

<b>Totals for Area of Interest</b>			<b>7.1</b>	<b>100.0%</b>

### Description

Erosion factor K indicates the susceptibility of a soil to sheet and rill erosion by water. Factor K is one of six factors used in the Universal Soil Loss Equation (USLE) and the Revised Universal Soil Loss Equation (RUSLE) to predict the average annual rate of soil loss by sheet and rill erosion in tons per acre per year. The estimates are based primarily on percentage of silt, sand, and organic matter and on soil structure and saturated hydraulic conductivity (Ksat). Values of K range from 0.02 to 0.69. Other factors being equal, the higher the value, the more susceptible the soil is to sheet and rill erosion by water.

"Erosion factor Kw (whole soil)" indicates the erodibility of the whole soil. The estimates are modified by the presence of rock fragments.
